### REASON TO RENT

The key reasons to rent versus buy:

**Emergencies:** When your boiler is malfunctioning and you need immediate assistance to keep your operations running, rental boilers are in stock and can be hooked up to accommodate a variety of load requirements.

#### High Temporary Workloads:

To accommodate periods of time where workloads are high, oftentimes there is no need to purchase additional boiler units. Renting a supplementary unit can help you get through periods of high demand.

#### Boiler System Repairs or Maintenance:

Properly serviced and maintained boilers are key to a safe, efficient operation. Renting a boiler for a short time will give

you the time to address your existing boiler needs while providing the workload capacities you need to keep processes up and running.

**Economic:** When it's not the right time to shoulder the costs of purchasing new boiler equipment, you can have greater flexibility by renting for a period of time.
